

ENTECH CONSULTING GROUP

PLANNING • ENVIRONMENTAL • CONSTRUCTION MANAGEMENT

Entech Overview

Entech Consulting Group's genesis begins in 1993 where we set out to create a company where clients could have the experience of having a partner in business that utilized their expertise to develop solutions and provide technical services that gave them useful assistance in achieving their goals in the midst of a competitive global economy. Entech's vision is to create a relationship with our client that lends to understanding what the client is trying to achieve, and aligning Entech's services to assist them in achieving their goals.

The principals believe that for Entech to succeed the company needs to look at the problems that face each client, take a holistic approach to considering all factors the client faces and to develop a solution and assign resources to resolve those problems. One of the key philosophies of Entech is being user friendly and responsive to client needs resulting in building trust for long-term relationships.

Entech's vision and philosophy proved invaluable to our first client, a paper coating facility. This facility needed assistance with their air quality permit application that was required for compliance with an air operating permit program. After meeting with the client and touring the facility, Entech identified that they qualified to opt out of the program altogether by redesigning their afterburner to more efficiently destroy methanol emissions, saving the client money while minimizing air pollution from their facility. This facility referred Entech to other companies within the industry expanding the reach of our environmental services.

Our Mission

To offer specialized environmental, program, project and construction management consulting to develop solutions and provide technical services that achieve client goals while protecting the environment responsibly throughout the growth of our client's business cycles.

During the 1990's Entech's services grew with our client's needs, spurred by economic and environmental factors. Our company added new programs and services along with an expanding client base, to include not only the private sector but public works agencies as well. An example of one of our key public works clients is Sound Transit, which was formed as an agency in 1996 with the mission of offering Light Rail, Commuter Rail and Enhanced Regional Bus service to the Pacific Northwest. Since Sound Transit's inception, Entech has partnered with them over the last decade in being their resident air quality and noise expert on preliminary engineering and environmental documentation efforts. Today, Entech continues to assist Sound Transit in preparing their projects for construction and overseeing construction.

In 2001, Entech expanded into Southern California where our headquarters are now located. Entech maintains an office in the Seattle/Tacoma area to continue to serve clients in the Pacific Northwest. Our geographic expansion efforts to expose additional clients to our vision has proven to be successful. We have added to our client base additional public works agencies in the areas of water facilities, schools and port districts continuing to provide environmental, program management and construction management services.

Entech is experienced in preparing environmental documentation for a variety of projects in California that have design elements that deal with roadways, bridges, ports, toll roads, HOV expansions and industrial facility operations. After we complete the necessary environmental approvals and securing permits we provide specialized construction management support services to see clients through to completion.

Primary Principles

Relationships

Through a driving commitment to excellence and sheer determination, Entech has built a reputation by providing unparalleled service, attention to quality and a flexible approach to addressing the specific needs of each client and projects building strong long-term relationships.

Knowledge

Entech ensures that we continue our track record of success by continuing to enhance our knowledge about the key factors our clients face by participating on industry boards, commissions and organizations to gain perspective of agency policy decisions.

Staff Excellence

Entech utilizes recruitment, retention and development to ensure that each staff member applies their considerate expertise to develop solutions that achieve client goals. This is accomplished by utilizing our proprietary management tool, Entech Management System (EMS), that affords an objective measure to meeting clients' staffing needs. EMS can rank each candidate's qualifications and skills based on education, project experience, specialized expertise and professional certifications against a matrix of position requirements. Each candidate is then scored based on industry requirements for job positions, client expectations and job requirements and on Entech's own exacting standards.

Entech also encourages professional development and training to better service its clients and rewards employees who contribute to business growth and development.

Partnering for Future Success

Our focus on the Entech/Client relationship is the key to our continued success – linking our business goals to our clients' needs. As Entech continues to grow and expand, our commitment is to continue to provide our clients with a resource to solving environmental problems. Our goal is to keep the clients' interests at the forefront by providing specialized environmental, engineering and construction management support services from the planning stage to construction. Being responsive to our client's needs, being user friendly, thinking "out of the box" for client solutions and building trust for long-term relationships is the evolution of Entech Consulting Group.

Our Services

- Environmental Management
- Environmental Permit Development
- Construction Management
- Specialized Air Quality & Noise Studies
